CENTRALAB TYPE DD DISC CERAMIC CAPACITORS

Primarily intended for by-pass coupling or filter service where high capacity is necessary and controlled stability is secondary. Disc ceramic capacitors have a higher dielectric constant, greater voltages, and higher capacities in less space than paper or mica types. Construction enables these units to operate for long periods of time under extreme moisture, temperature, and vibration. 1000 volts DC working except #, which are 600 volts DC working. JFD precision bore solid dielectric Piston Trimmer. Capacitors with special anti-corrosion metalizing. Meets or exceeds MIL-C-14409B. Glass operate from —55°C to 125°C; quartz from —55°C to 150°C. Features: 6 patented precision anti-backlash drive mechanisms; Hi-Life standard panel mount; MCD; Miniature Telescoping sliding piston and direct transverse. Five dielectric materials and matched metalized for homogenous bond of metalizing to dielectric. Low T.C., low loss of inductance. All have highest level shock and vibration resistance. Green Glass "N" prefix units with higher 0 increase delta C's 30% over other comparably sized units, and have Hi-Life "Y" mechanism. Low cost "Y" suffix units combine Hi-Life adjustment mechanism with standard glass dielectric are physically interchangeable with corresponding standard units. JFD trimmers have been exclusively selected for the Apollo, Gemini, and Minuteman programs.

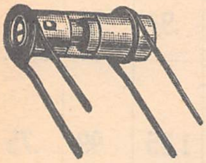
MINIATURE SERIES



JFD Miniature Trimmer Series features exclusive telescoping tuning assembly for miniaturization. Up to 50% savings in length for a given capacitance range. Mechanical stops at both ends of adjustment. NVC and VC glass dielectric, ¼ dia. NMQ quartz dielectic ¼" dia. "Y" series directly interchangeable with standard VC units, and NMQ units with standard MQ units with added feature of longer life and lower cost. Uses 7104-5 tool.

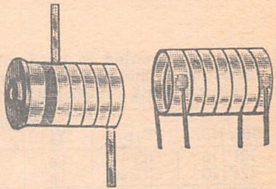
FIXED METALLIZED INDUCTORS



Precision metallized miniature inductors feature large space economy, fast assembly and reduced weight. The inductor employs a silver film bonded to the glass dielectric. This construction results in a low temperature coefficient of inductance and low distributed capacitance. All leads are made of plated copper. High Q over a broad frequency range. All inductors are available in panel or printed circuit types. Temperature: —55°C to +125°C (*)—Q measured at 75.0 MC. (**)—Q measured at 25 MC.

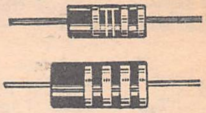
Allen-Bradley Resistors

INDUSTRIAL GRADE MIL-R-11 TYPE RC



Allen Bradley hot molded composition fixed resistors are high quality, intended for general purpose use in the electronics industry. Because of their small size, uniformity, ruggedness and moderate cost, they are equally at home in military, industrial, and consumer product applications. Molded composition resistors meet all requirements for MIL-R-11, except *. Minimum resistance under MIL spec is 2.7 ohms for ½ watt and 10 ohms for ⅛ watt. Meets salt water and high humidity requirements. Unexcelled for low noise level. Dissipate heat rapidly—can be used at their full wattage ratings at 158 F. ambient temp. 1½" leads. Wt. 2 oz.

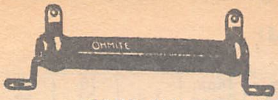
OHMITE Fixed Resistors



Lug type, wire-wound with vitreous enamel. Wire of the finest alloy and largest possible size is used for each resistance. The original uniform close spacing of the turns is maintained by the anchoring effect of the vitreous enamel. The wire is securely welded to the terminal lugs. Tolerance: 5%. Shpg. wt.: 10-50 watts, 4.0 oz.; 100-225 watts, 1 lb.

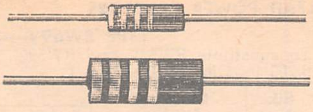
OHMITE "LITTLE DEVIL" RESISTORS



Molded composition resistors meet all requirements for MIL-R-11E, except *. Minimum resistance under MIL spec is 2.7 ohms for ½ watt and 10 ohms for ⅛ watt. Meets salt water and high humidity requirements. Unexcelled for low noise level. Dissipate heat rapidly—can be used at their full wattage ratings at 158°F. ambient temp. 1½" leads. WT., 2 oz. **Figures in large, bold type are 10% EIA values. All values available in ±5% tolerance.**

NC RESISTORS

Provide circuit designer ± 50 ppm temp. coefficient stability with ½ and 1% tol. in glass tin oxide film construction. Meets and conforms to Mil-R-10509E, Characteristic C, and other circuitry requiring reliable load life performance. Design tolerances, high frequency characteristics, and low current noise permit greater design freedom with other, more costly components.

AXIAL LEAD VITREOUS RESISTORS

Particularly adapted to printed circuit, terminal board, and point to point wiring applications. These resistors save considerable space because of elimination of mounting brackets and terminal lugs. Standard resistance tolerance is ±5% for 1 ohm and higher. Finished in vitreous shade of tealgreen. Will operate with stability and reliability under most variable environmental conditions. Economically priced for quantity selector.

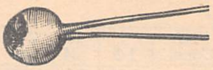
YSI Thermistors

PRECISION THERMISTORS

Thermistors which match a published resistance-temperature curve and thus each other to ± 1% not only at 25° C but over most of their useable range of —80° C to +150° C. Each thermistor is provided with resistance-temperature data for each degree C and with tolerance curves both in resistance variation and temperature sensing interchangeability. Base resistance from 100 ohms to 1 Megohm at 25° C available to ease circuit design impedance matching problems. Useful as transducers for measurement and control circuits where precision of YSI thermistors allow interchanging of transducers and multiple monitoring from single circuits. In control circuitry direct dialing of set points is possible as is trigger action at a specific temperature since resistance at any usable temperature is known to close tolerances. Also useful as temperature compensating devices for transistors, meters, circuits, etc. Physical size: .095" maximum dimension #32 solid tinned copper leads, 3" long. Thermistors are epoxy encapsulated for ruggedness and long life. Each thermistor supplied with data and with dissipation information, time constant and instructions. Rated at 25° C.



- Low Cost Precision Thermistors
- Matches Standard Curves—80°C to 150°C

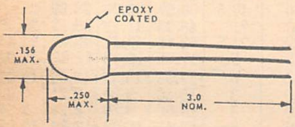
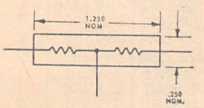
THERMILINEAR® THERMISTOR DEVICES

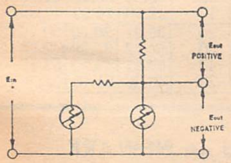
Linear Output Thermistor Networks



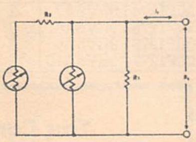
Thermistor Composite



Resistor Composite



Linear Voltage vs. Temperature



Linear Resistance vs. Temperature

A composite precision thermistor device which, in conjunction with the precision resistors supplied, provides linear voltage output or linear resistance change with change of temperature. Sensitivities of 20 mv/°C. and more are common, 400 times the sensitivity of an IC thermocouple. Linearity deviation is as little as 2 parts in 1000 from 0 to 100°C. Combined absolute accuracy, linearity and interchangeability specifications of as little as 3 parts in 1000 from 0 to 100°C. Greater accuracies, interchangeabilities, and linearities available for shorter standard ranges. Parts guaranteed to stay within tolerances for three years. Useful for direct digital temperature indication with DVM or linear recorder. Provides linear temperature compensation with thermistor sensitivity. Time constant: 1 second, in well-stirred oil bath. Parts consist of composite thermistor and resistor assembly. Thermistor composites are manufactured to absolute accuracy tolerances of ±0.15°C from —30 to +100°C. For complete information and technical data, write Newark. Type 44018 and type 44019: additional thermistor composites for replacement or multiple input work.

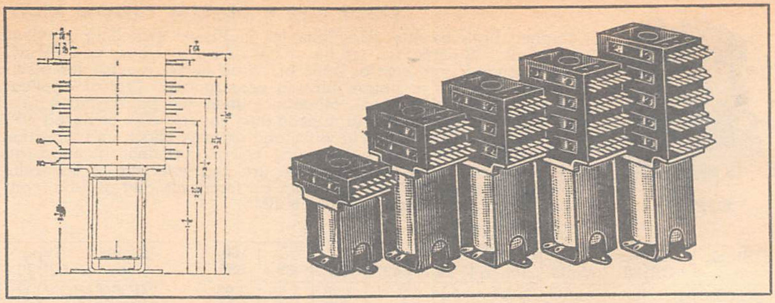
T-BAR RELAYS

ELECTRONIC CONTROLS INC.



- Stack-up Contact Wafers Switch up to 60 Poles at Once
- Easily Mounted — With Only 2 Screws — In Any Orientation
- Easily Wired — Snap-on Crimp Terminals Fit into Block Connectors

SERIES 801 T-BAR RELAYS

Reliable, ultra-compact, solenoid actuated relays with a unique design employing stacked-up enclosed contact wafers for up to 60-pole switching. Ideal for aircraft, telemetry, communications, computers. Gold bonded silver contacts are rated to carry 500 watts resistive (5 amps), make or break 3 amps. Less than 30 milliseconds operate and release time. Min. life: 20 million mechanical operations. 1000 VAC dielectric strength, terminal-to-case; temperature range —55 to +85°C. Terminals will mate with T-Bar Connectors (below), which simply push onto contact wafers for quick, easy wiring, or solder connections may be made. Contact assemblies are in dust-tight plastic enclosures which measure 1 1/32" wide by 2 3/8" long; height is 13/32" per wafer.

T-BAR RELAY COIL CHARACTERISTICS

All characteristics are nominal and subject to normal manufacturing tolerances. All are for continuous duty. 115 VAC units have a full-wave bridge rectifier and use the same coils listed under 110 VDC. Operate at 80%, release at 20% of nominal voltage. Actuator assembly size: 1.375" mtg. centers x 2 1/32" high, except one-wafer relay use a shorter actuator (1 15/32" high).

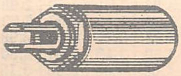
TUBULAR SOLENOIDS



Tubular Solenoids from a 7/16 to a 1½" Diameter available in both Intermittent and Continuous Duty 24VDC. Clear design allows side by side mounting, and permittnig easy installation just insert threaded bushing through chassis hole and tighten furnished nut. Computers, Aircraft and mis sels, Office Equipment and Copy Machines are some of the typical applications for these products. Intermittent Types cannot be energized for more than 1 minute or be permitted to rise more than 85°C above 25°C ambient, without giving sufficient time to cool between operations. Continuous Duty Types are designed so that they will not rise more than 85°C above the 25°C ambient temperature when operated at rated load. Life expectancy at rated load is 10 million cycles.

The same as MER Stepper above but with an added Solenoid, added to increase its already. Energizing the solenoid physically moves the wiper (S) away from the deck. This allows advance or reset of the wipers without contacting the deck. This innovation adds many switching circuit advantages as well as increasing contact capacity and increasing electrical life. The power input to step magnet is reduced from 35VA to 20VA on this particular unit. (Solenoid is meant to be energized whenever reset coil is energized) because of the greatly reduced friction during reset. 20.8 Watts 20.9 Volt Amperes 24 points 22 Active contacts 20 Steps P/S. JRM MINIATURE DRY REED RELAYS

JRM relay employs dry reed glass capsules with 2 types of contact arrangement: Form A (SPST-NO) or Form C (SPDT). Biasing with a permanent magnet changes Form A to a B (SPST-NC), using a 2-cavity bobbin and requiring the observation of coil polarity. Combining Form A with B results in a single Form C (SPDT) break-before-make; using a 3-cavity bobbin. 1.125" long; .468" high; width varies with contact arrangement. Oper. time: 1ms. Release time: .05ms. Pickup: 75% nom. @ 25°C. Rating: 10 watts.

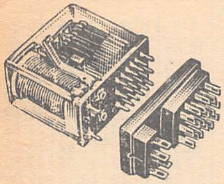
R10-E1: SOLDER TERMINALS, STUD OR PLUG-IN SOCKET MOUNTING



Two times more pull force-optimum distribution between magnetic core and pole piece cross sections and coil volume, and a low reluctance armature bearing produces a force-displacement product of 140 gm/mm at .050". This results in higher contact pressure and greater over-travel. Sensitivities to 20 mw per pole. Six custom contact styles available—DPDT to 6PDT. UL file #E42810. Operating temperature —55° to +72°C. Weight 22 to 40 grams. (Final suffix of type number signify coil ohms.)

Two-part systems employ integral receiver units (containing photo-cell and relay) and prefocussed light sources. Three-part systems have miniaturized light sources and receivers, for use where space is limited; receivers connect to remote amplifier-relay units.

TWO-PART (INTEGRAL RECEIVER) SYSTEMS

All units operate from 115 VAC, 50/60 hz, and are housed in NEMA type 1 only enclosures. Complete system consists of 8L3 light source plus receiver unit appropriate to application. Operate over a 12 foot range; no inter-wiring necessary.

8P3, 8P5 & 8P6 General-Purpose Receiver. For switching rates up to 600 operations/minute contacts rated 10A or 28VDC/115VAC. Wt., 13 oz.

8P8, 8P9 and 8P10 High-Speed Receivers. Operate 1200 times per minute. Relay contacts rated 5A at 28VDC/115VAC, 2.5A at 230-VAC. 8P8 comes with wire leads, ½" conduit bushing and mtg. bracket 8P9 has bracket and octal plug. Wt., 13 oz.

8RCO1A & 8RCO2A Miniature Low-Cost Receivers. 120 cycles/minute switching. Plug-in units fit standard 5-pin socket; SPDT relay contacts rated 3A at 28VDC/115VAC. May be used for beam-breaking or fluctuating-intensity applications: 8RCO1A relay picks up at 5 foot-candles, drops out at .1 fc.; 8RCO2A for high-ambient-light conditions, picks up at 5 fc; opens at .5 fc. Supply voltage 115V 60 Hz, UL approved. Wt., 3 oz.

8L3 Light Source. Provides actuating beam for all 8P and 8R receivers. Set to span up to 12 feet. With mounting bracket, ½" conduit bushing, and 16" leads (18 AWG). Wt., 13 oz.

Time Delay and Mercury Plunger Relays

AGASTAT ELECTROPNEUMATIC TIME DELAY RELAYS

Model 2412, 2452. Time delay on pull-in. Timing cycle begins when coil is energized. Coil kept energized throughout time setting preceding DPDT contacts transfer from de-energized to energized position. Coil de-energized: contacts retransfer immediately (25 m-sec). Coil de-energized during timing cycle, contacts remain de-energized & timing mech, resets to start position for full time cycle on next energization of coil.

Model 2422, 2462. Time delay on drop-out. Coil energized: DPDT contacts transfer & stay in transfer position. De-energization coil: Time delay begins. Timing cycle: contacts stay energized. End time delay setting: contacts transfer back to de-energized position. Coil re-energized during timing cycle; contacts energized produce full time delay upon next de-energization if coil remains de-energized through time setting.

Model 2432. Double head unit provides independent delay of contact transfer on both energized & de-energized cycles of coil, 6⅝"x3⅜"x3⅛". Shpg. wt. 2½ lbs.

Auxiliary Switch Kits: Type "T" SPDT contacts rated 10A/120V, 60 cy. attached to Model 2412 or 2422. 2412 units: "T" switch provides 2-step timing. Switch transfers time delay up to 30 sec. Type "L" switch gives immediate transfer of contacts both on energization and de-energization cy. of coil. *Needle valve.

HOW TO ORDER CAM TIMERS

Locate desired time cycle duration in "Gear Assemblies" chart below, and order gear-and-rack assembly listed in left-hand column. Appropriate foundation (motor-switch) units appear at top of "Time Cycle" columns: CM types are single-cicuit, recycling; MC types are multi-circuit recycling; RC types are multi-circuit, single-time-cycle (see detailed descriptions below): Example: Suppose 4 circuits are to be controlled, with a 30-second time cycle, recycling. Order gear-and-rack assembly A12, stock number 24F315, and note that foundation unit MC2 is required. At bottom of page, locate MC2 under heading "4 SWITCH CHASSIS" and order stk. no. 62F2010. All units U/L & CSA approved.

Note: in some cases RC0, RC1, MC0 and MC1 units may require a special high-torque motor. Multiply time cycle (in seconds) by 2/3; result will be maximum number of switches that can be operated by a standard unit. For example, with a time cycle of 9 seconds, up to 6 switches may be operated by a standard motor; if more circuits are to be controlled, order a high-torque motor. On RC0 and MC0 units, add $27.50 to listed price for high-torque motor; on RC1 and MC1 types price must be increased by $29.50.

Alternate Ordering Information: specify desired time cycle, number of switches, operating voltage and frequency. Such information may expedite delivery by allowing NEWARK to ship model in stock with desired time cycle.

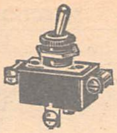
AC-DC UTILITY AND HEAVY DUTY

8280



8365

8386

7320

Small and compact, designed for small motor loads and radio appliances. Employs quick-make, quick-break mechanism. Reduces pitting of contact surfaces due to high arcing on overload currents. Impossible to "tease" the switch due to over center spring construction. Enclosed in phenolic housing. Terminals are well separated to reduce possibility of electrical creepage and to facilitate wiring. Super structure and bushing are bright nickel plated. Standard and heavy duty employs same basic mechanism with large contact surfaces to reduce pitting.

Switchcraft's "Quick-Ground" connectors feature a separate "Ground-Terminal" electrically integral with the connector shell. Ground continuity between mating plugs automatically accomplished through the exclusive "Ground Contactors." Possible loss of insert screw is eliminated by "Captive Design" Insert Screw. Socket and pin assemblies utilize "wedge-action" to insure firm, reliable positioning in connector shell. Q-G series 3 and 4-contact audio connectors offer 4 and 5-contact versatility when "Ground Terminal" is utilized. Can be used interchangeably with Cannon type (XLR-3), (XLR-4) and Amphenol type (91-850) Series.

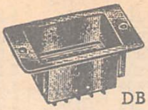
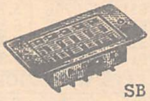
SERIES 300 SB AND DB PLUGS AND SOCKETS



DB



SB

Designed for medium duty applications small in size with good separation between contacts. Arranged for either cap or panel mounting. All plugs and sockets are polarized. Plugs with 24 to 33 contacts have a special polarizing pin to facilitate correct positioning of mating plug and socket. Insulating material is molded bakelite. Phosphor-bronze "knife-switch" type socket contacts engage both sides of flat plug contacts, providing double contact area. All contacts are cadmium plated. Plug prongs are 5/32" wide and 3/64" thick. Formed metal caps are finished in black wrinkle. Feature MONOBLOCK construction which is compatible with the old two-piece types. New construction eliminates internal moisture traps and permits external pre-wiring as well as removal and replacement of individual contacts if necessary. Contacts are "locked-in" to withstand wiring stress. Rated Voltage: 730 Volts rms; Contact Resistance: 016 Ohms max. Rated Current: (2-12 contacts) . . . 7.5 amperes, (15-33 contacts) . . . 4.5 amperes; Rated Wattage: (2-12 contacts) . . . 1875 watts, (15-33 contacts) . . . 1125 watts.

Type SB. Sockets with shallow bracket for flush mounting.
Type DB. Sockets with deep bracket for recessed mounting.

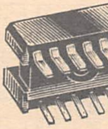
DUAL-IN LINE INTEGRATED CIRCUIT SOCKETS

- HIGH CONTACT RETENTION
- LOW CONTACT RESISTANCE
- HIGH ENVIRONMENTAL STABILITY



These sockets are designed for testing, prototype, or production applications. They offer excellent resistance to corrosive atmosphere and to extremes of temperature and humidity. The unique bowed contact provides high contact forces yet permits easy insertion or removal of the D.I.P. Contact resistance is .006 ohms maximum. They will accept any standard 14 or 16 dualinline package with round or flat heads. The socket leads are on the same centers as the D.I.P. leads, so they can be used with PC boards that are designed for direct insertion.

* Indicates Black Phenolic insulator, cadmium plated contacts.

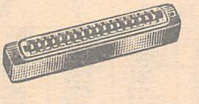
PRINTED CIRCUIT CONTACTS



Insures positive contact with irregular board surface. Double spring action and a wide flexing range make contacts easy on printed circuit surfaces and enable them to withstand thousands of insertions and withdrawals. Double plating of contact surface provides protection against deterioration. One piece connector body is made of flame-retarde tndiallyl phthalate glass fiber. Voltage is between adj. contacts—1800 vac (RMS), Insulation Res. 5,000 megs. Contact spacing—.156" centers. Contact: Material-Beryllium copper or phosphor bronze (1150) all have .128" clearance holes, all have two rows of independent contacts. Solder terminals conform to (MIL-C-Z1097).

TYPE UHF CONNECTORS

Series UHF RF connectors will operate satisfactorily at frequencies up to 200 megacycles without any special precautions, and used at frequencies up to 500 megacycles under certain conditions. These connectors will also handle all peak votages up to 500 without danger of breakdown. Large single and twin-contact connectors are provided with rubber sealing gasket for weather-proofing, while small single and twin-contact types can be waterproofed by application of Amphenol 307 Silicone Compound to mating insulator surfaces. Metal surfaces are silver-plated. Beaded chains for caps are nickel-plated brass. Shipping weight each, 4 oz. approx.

SOCKETS FOR RCA 8072, 8121, 8122, AND SIMILAR TUBES

For high frequency tubes. Continuous heat resistance to 500°F. Glass-filled silicon base. Heat treated beryllium copper contacts. Base material of low dielectric constant, which results in low pin-to-pin and shunt capacity. Teflon chimney. Elevation pads. Socket contacts grip tube pins at base of tube—providing minimum inductance. Barriers between terminals. Large center hole and basic configuration results in low capacity; three mounts provide stable mounting. With numbered terminals. Low inductance screen by-pass capacitor available for VHF and UHF operation.

FIT-221 — POLYOLEFIN HEAT SHRINKABLE TUBING

FIT-221. This improved all purpose extruded tubing shrinks 50% (2:1 ratio) with only 5% longitudinal shrinkage. Fewer sizes cover more applications. When a temperature of approximately 275°F is applied for seven seconds, the tubing returns to predetermined size and forms permanent tight fitting mechanical bond, even over irregularly shaped materials. Tubing retains form stability throughout its temperature range of —67°F to +572°F. Shrinking done by Heat Gun, oven radiant heat, dipping in hot liquid, or hot iron. Clear tubing may be used where jacketed, printed components or cable data is visible and inspection of components is desired. Supplied in lengths of 4 feet and 6 inches. *6 inch package colors: black, white, red, yellow, blue, clear. Specify color. **4 foot lengths stocked in black and clear. Also supplied in packaged assortments.**

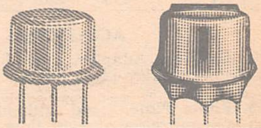
SELF ENCAPSULATING POLYOLEFIN TUBING



Easily-used encapsulation tubing product. When a temperature of 275°F (135°C) is applied, the outer wall shrinks while the inner wall melts and flows to eliminate voids and provide moisture proof encapsulation. Becomes a hard, tough, homogenous molding upon cooling. Good for use on electrical cable junctions and splices; as a mechanical shield for rough edges; and as a vibration shield. Fraction in Type No. shows size. **Sold only in standard pkgs. as shown.**

- **Will not Shrink During Soldering!**
- **Conforms to MIL-1-22129B**

Unmatched by any other type of tubing for use in electrical applications at high frequencies and temperatures; continuous operation at 250° C. retaining its flexibility throughout temperature range. At high frequencies, dielectric strength is many times that of other insulating materials; is chemically inert having a moisture absorption. Thin wall tubing, **TFT 200.** permits miniaturization and compactness. Application where high heat resistant, flexible, non-flammable, chemical solvent and erosion-resistant material is required. Electrical and chemical properties conform to MIL-1-22129B. **Natural only.** Standard wall tubing, **TFT-250** has characteristics similar to TFT-200, but for use in application where additional dielectric values and mechanical strength are necessary. Colors: **Natural only. Min. order 100 feet.**

MICROPHONE AND INSTRUMENTATION CABLES—SHIELDED

General purpose shielded cables, for all stage, studio and instrumentation applications. Rubber types have rubber-insulated tinned copper conductors, tinned copper-braid shield, black rubber jacket overall, (†)except black Neoprene jacket. **8402 & 8408 have brown hypalon jacket. Vinyl types are similar, but have polyethylene-insulated conductors, chrome vinyl jacket. *Miniature cables having tinned cadmium-bronze conductors. Rubber cables have greater abrasion and impact resistance, are extra-flexible—will lie flat without kinking. Plastic cables have lower capacitance, greater ozone and oil resistance, lighter weight. Neoprene and rubber types are recommended for outside use, cold weather applications. All types available only in spool sizes listed.

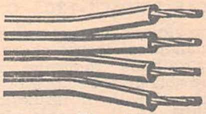

Fig. 6

Fig. 1. Type 8290. SHIELDED & JACKETED ENCAPSULATED TWIN LEAD. TV lead-in for best color and 82 channel reception. Low losses per 100 ft., eliminates interference caused by line pick up, can run thru gutters, conduits, and underground. No matching transformers. Terminals on both ends.

Fig. 2. Type 8285. PERMOHM All-Weather 300-ohm twinlead. 2 parallel Copperweld conductors, orange polyethylene insulation and web between conductors, encapsulated in cellular polythylene oval jacket. Delivers 3 to 136 times more power than ordinary flat lead-in for strong, clear signals on all channels despite industrial contamination, salt spray, wet weather, rain, ice, fringe area reception. An excellent color, UHF, VHF cable. See Antenna Hardware page for "E-Z" standoff insulators.

Fig. 3. Type 8275. CELLULINE. 2 parallel Copperweld conductors with inert-gas-filled unicellular polyethylene core. Lower losses because of lower dielectric constant. Uniform electrical characteristics, because moisture between conductors is eliminated. Thick polyethylene outer jacket and wind-resistant round shape result in longer lasting, more efficient line for UHF, VHF and color. No end sealing required.

Fig. 4. Type 8230. ..WELDOHM. Copperweld conductors have 1½ times greater strength than plain copper for long-lasting installation.

Type 8225. 300 OHM FLAT TWINLEAD with bare copper conductors, brown polyethylene insulation for best weathering.

POLYFOAM COAXIAL CABLES

Cellular polyethylene dielectric material provides lower weight, cost, capacitance, and attenuation than standard RG types. Widely used in commercial transmitter applications such as community TV and in ham stations. The dielectric constant is 1.50 as compared to 2.25 for solid polyethylene. It has a specially compounded non-contaminating black polyethylene jacket providing improved weather and abrasion resistance. *Sweep tested—1000 ft. min. order.

TWIN LEAD TRANSMISSION LINE

TWIN 300 LEAD

Twin lead recommended for UHF-VHF television and FM antenna installations. Use of brown virgin polyethylene dielectric assures minimum signal loss and a more constant impedance over its exceptionally long life. Resistant to sun, chemical fumes, salt laden and gas polluted air.

HELIAX FOAM DIELECTRIC COAXIAL CABLES

Heliax coaxial cables are premium cables, ideally suited for any application where use of coaxial transmission line is indicated. Inner conductors are solid copper (FHJ1-50), copper clad aluminum (FHJ4-50B) and stranded copper (FSJ4-50). Dielectric is cellular foamed polyethylene. Outer conductors are "solid" copper, corrugated for flexibility and strength. Cables are jacketed with black extruded polythylene suitable for operation down to —54°C (—65°F) and installation down to —40°C. Maximum operating temperature is 80°C (176°F). The solid outer conductors provide complete shielding with none of the noise or RFI experienced with braided cables. Attenuation is considerably lower than similar size "RG" cables—see graph below. Fittings come complete with assembly instructions and are easily attached with ordinary hand tools. Do not use standard UG fittings with these cables.

FHJ1-50 and FHJ4-50B are standard types for normal installations and are easily formed during installation. Minimum bending radii are 2.5" and 5" respectively. FSJ4-50 is super-flexible version with deeply corrugated outer providing flexibility approaching that of braided cables. Minimum bending radius is 1.25".

NOTE: Cables are stocked and sold only in lengths indicated.

FERRAMIC CUP CORE ASSEMBLIES

Temperature Compensated Cup Core Assemblies. Designed for filter applications requiring precision tuneable inductors having low loss characteristics over a wide temperature range. Used at frequencies from audio to 500 kHz with Q value as high as 850. Specific inductance (L/1000 turns) is accomplished by inserting a precision ground air gap in center post of one or both cup cores in a matched pair. Size and tolerance of air gap controls inductance per 1000 turns. Adjustment beyond specific inductance of cup cores is provided by trimmer assembly. All cup cores have a positive linear temperature coefficient of effective permeability and inductance. Over a given temperature interval this is expressed as:

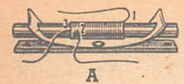
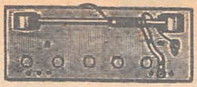
FERRITE ROD LOOP ANTENNAS



A

B



C

D

E

Designed to receive standard broadcast band (540-1850Khz) when used with proper tuning. Figures C, D & E are supplied with a mounting board which can be easily removed if an alternate method of mounting is desired, others have mfg. bracket. Make excellent antenna for conventional vacuum tube and transistor receivers. Type 705-A has adjustable inductance to permit peaking antenna stage by sliding coil along ferrite rod. 2000 series have a secondary which is over-coupled for maximum gain stability with a variation of output and are designed to match an input impedance of approximately 600 ohms. Type 6300 antenna coil replaces a loop antenna and is supplied with 18" of antenna wire. It is screw adjustable. Average Shpg. wt.: 3 oz.

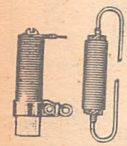
FREQUENCY SELECTIVE R.F. CHOKES



Designed for maximum efficiency and highest impedance at specific operating frequencies. Eliminates the designer's task of attempting to choose the best coil for a particular application from miscellaneous and often insufficient design data. Designed to cover the major amateur, industrial and citizens bands and will also operate efficiently at frequencies approximating the recommended frequencies.

ADAPTERS AND EXTENDERS

Basic plug and socket structure used in standard test adapters. Circuits can readily be opened for current measurements, or cross-connected in many ways for experimental purposes. Models 1262, 1263, and 1264 are socket extenders. These shift wear from the socket itself to the extender. Sockets have highest grade beryllium copper contacts. Av. shipping wt., 2 oz.

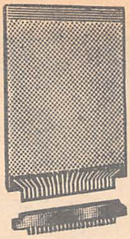
PLUGBORDS AND RECEPTACLES



Plug-In Test Circuits. Prototype of To-Be-Printed Circuit Cards. Modular Plug-In Cards — Standard Plugboards made from 1/16" thick Epoxy Paper material or Epoxy Glass (WE) with all-over grid of .062" holes on alternate .1" centers. Locate Vector T-28 Push-In Miniclip Terminals and eyelets where required and lay out components to exactly duplicate printed card, if desired. For making manually wired prototypes which can later be made as etched or welded circuits. For short production runs, hand-wired boards (soldered or welded) can be made faster than etched boards. For general use epoxy paper boards may be punched, sawed or drilled if desired; —1 GN series has nickel plated gold flashed contacts and equally spaced notches in connector mounting: Elco Varicon contacts come attached to board or etched connector supplied on 838A and 838. Different sizes, hole patterns and materials readily available to order.

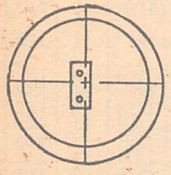
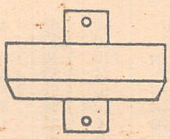
STANDARD LINE BUTTON CELLS — 1.2 VOLTS





Thin sintered plate construction makes this cell ideal for instruments, appliances, photo-flash and all portable devices. Sporting a 1.2 average voltage, these batteries can perform 5000 cycles at discharge depth not exceeding 25% of rated capacity. Will operate in temperatures ranging from —40° to +60°C, with an optimum range of —20° to +40°C. May be stored indefinitely at a range of —60°C to +60°C.

Button Cells. Compact size permits easy stacking to form multiple cell battery configurations with resulting optimum space utilization and power-volume ratio. Particularly suited for low-drain, high capacity applications.

STANDARD LINE CYLINDRICAL CELLS — 1.2 VOLTS

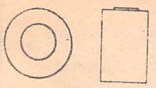

Fig. 1

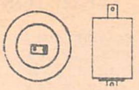

Fig. 2

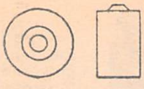

Fig. 3

Cylindrical Cells provides maximum discharge rates and capacity. Suited for cordless consumer and electronic products. General Electric cylindrical cells feature a resealable vent mechanism designed to relieve any harmful or unnecessary pressure build-up.

Rechargeable batteries of any voltage may be obtained by connecting G.E.'s cells in series. Example, to obtain 12 volts, ten G.E. 1.2 volt cells would be connected in series.

BATTERY CHARGERS

For Nickel Cadmium and Lead Acid Batteries. Manufactured by the world's largest manufacturer of battery chargers, Electronic Components Corporation. Each battery charger includes an isolation transformer tested at 2000 V RMS and is completely potted, eliminating any possibility of shock, even if accidentally immersed in water. Extremely economical, costs less than the components if purchased separately. Charges cells in series with half wave rectification. Output leads are stripped and tinned; appropriate battery clips, connecters, and alligator clips are listed elsewhere in this catalog.

Nickel-Cadmium Batteries: Manufacturers recommend a charging current equal to 10% of the battery's capacity (1 ah battery, use 100 ma). Such a current will never damage the battery, even after it is fully charged. Full charge takes 14 to 16 hours.
Lead Acid Batteries: Follow battery manufacturers' recommendations. Unless using an extremely small trickle charging current, it is usually necessary to remove the charger once the lead acid battery is fully charged. Charging time determined by charging current.
